

Friday 8 July, 14:45 – 15:05

Session 15: Neutrino cosmology

**Neutrino mass from cosmological surveys**

O Lahav

University College London, UK

We review the prospects to measure the neutrino mass and other properties from cosmological wide-field surveys, including DES, DESI, Euclid, LSST and SKA. The talk will focus on how to control systematics and parameter degeneracy, as well as on how to combine cosmological data with terrestrial neutrino experiments.
