

Friday 8 July, 11:55 – 12:20

Session 14: Neutrino properties II: searches for neutrinoless double beta decay (continued) and direct mass measurements

Future neutrinoless double beta decay search experiments

A Wright

Institute of Particle Physics and Queen's University, Canada

In the coming years a number of experiments will search for neutrinoless double beta decay with ever increasing sensitivity. In this talk, upcoming neutrinoless double beta decay search experiments will be reviewed and related research and development efforts discussed.
